1) $\frac{1}{10} + \frac{2}{5} = \frac{1}{10} + \frac{4}{10} = \frac{5}{10} = \frac{1}{2}$

2) $\sum_{n=0}^{3} n^2 = 0^2 + 1^2 + 2^2 + 3^2 = 1 + 4 + 9 = 14$

The summation should go up to 5, not 3. The student has only calculated the sum up to n=3.

$\sum_{n=0}^{5} n^2 = 0^2 + 1^2 + 2^2 + 3^2 + 4^2 + 5^2 = 0 + 1 + 4 + 9 + 16 + 25 = 55$

3) $3x - 10 = 5 \quad | + 10$

$3x = 15 \quad | : 3$

$x = 5$

The student incorrectly calculated 65 + 35. It should be 100, not 100.

4) $5x - 35 = 65 \quad | + 35$

$5x = 100 \quad | : 5$

$x = 25$
